## CE DECLARATION OF CONFORMITY

Manufacturer: FAAC S.p.A
Address: Via Benini, 1-40069 Zola Predosa BOLOGNA - ITALY
Declares that: 452 MPS control board,

- conforms to the essential safety requirements of the following directives:

73/23/CEE and subsequent amendment 93/68/CEE.
89/336/CEE and subsequent amendment 92/31/CEE and 93/68/CEE
Additional note:
This product underwent tests in a typical uniform configuration (all products manufactured by FAAC S.p.A.).

Bologna, 01 January 2001
The Managing Director
A. Bassi

## INSTALLATION WARNINGS

general safety obligations

1) CAUTION! It is important for personal safety to follow all the instructions carefully. Incorrect installation or misuse of the product may cause people serious harm.
2) Read the instructions carefully before starting to install the product.
3) Packaging material (plastic, polystyrene, etc.) mustnot beleft within reach of children as it is a potential source of danger.
4) Keep the instructions in a safe place for future reference.
5) This productwas designed andmanufactured strictly for the use indicated inthis documentation. Any other not expressly indicated use may damage the product and/or be a source of danger.
6) FAAC accepts no responsibility due to improper use of the automated system oruse other than that intended.
7) Do not install the equipment in an area subject to explosion hazard: inflammable gases or fumes are a serious safety hazard.
8) Mechanical construction elements must meet the provisions of UNI8612, EN 12604 and EN 12605 Standards
To obtain an adequate level of safety in non EU countries, the above mentioned Standards must be observed in addition to national Standards.
9) FAAC will not accept responsibility if the principles of GoodWorkmanship are disregarded in constructing the closing elements to be motorised, and if any deformation occurs during use of the said elements.
10) Installation mustmeet the following Standards: UNI8612, EN 12453 and EN 12445.
11) Before carrying out any work on the system, switch off the power supply.
12) The mains power supply of the automated system must be fitted with a allpole switch with contactopening distance of 3mm or greater. Use of a6A thermal breaker with all-pole circuit break is recommended.
13) Make sure there is a differential switch with 0.03 A threshold upstream of the system.
14) Checkthat the earthing system is correctly made and connectthe closure metal parts to it. Also connect the Yellow/Green wire of the automated system to the earthing system.
15) The automated system includes an intrinsic anti-crushing device consisting of a torque control which, however, must be installed together with other safety devices.
16) The safety devices (EN 12978 Standard) protect any dangerous areas against Mechanical movement risks, such as crushing, dragging, and shearing.
17) Use of at least one indicator-light (e.g. FAAC LAMP MINILAMP, etc.) is recommended for every system, as well as a warning sign adequately fixed to the frame structure, in addition to the devices mentioned at point "16".
18) FAAC accepts no responsibility regarding safety and correct operation of the automated system, should components made by manufacturers other than FAAC be used in the system.
19) Use only FAAC original spare parts for maintenance.
20) Do notmake any alterations to the components of the automated system.
21) The installer must supply full information regarding manual operation of the system in case of an emergency and hand to the user of the system the "User's Guide" included with the product.
22) Do not allow children or other persons to stand near the product while in operation.
23) Keep remote controls or any other pulse generator well away from children, to prevent the automated system from being activated accidentally.
24) The user must refrain from attempting to repair or adjust the system personally and should contact qualified personnel only.
25) Anything not expressly provided for in these instructions is not permitted.

## CONTROL BOARD 452 MPS

## 1. WARNINGS

Important: Before attempting any work on the control board (connections, maintenance), always turn off power.

- Install, upstream of the system, a differential thermal breaker with adequate tripping threshold.
- Connect the earth cable to the appropriate terminal on the J3 connector of the equipment (see fig.2).
- Always separate power cables from control and safety cables (push-button, receiver, photocells, etc.). To avoid any electric noise, use separate sheaths or a shielded cable (with earthed shield).

4. ELECTRIC CONNECTIONS

## ENGLISH

4.1. Connection of photocells and safety devices

Before connecting the photocells (or other devices) we advise you to select the type of operation according to the movement area they have to protect (see fig.3):
Opening safety devices: they operate only during the gate opening movementand, therefore, they are suitable for protecting the area between the opening leaves and fixed obstacles (walls, etc) against the risk of impact and crushing.
Closing safety devices: they operate only during the gate closing movement and, therefore, they are suitable for protecting the closing area against the risk of impact.

Connection of a pair of closing photocells, a pair of opening photocells and a pair of opening/closing photocells (recommended lay-out)

Fig. 4

Opening/closing safety devices: they operate during the gate opening and closing movements and, therefore, they are suitable for the opening and closing areas agains $\dagger$ the risk of impact.

FAAC recommends use of the lay-out in fig. 4 (in the event of fixed obstacles at opening) or in fig. 5 (no fixed obstacles).
N.B. If two or more devices have the same function (opening or closing), they should be connected to each other in series (see fig. 12). N.C. contacts must be used.

Connection of a pair of closing photocells and a pair of opening/closing photocells (recommended lay-out)

Fig. 5

Connection of a closing safety device and an opening safety device

Fig. 6

Connection of 1 pair of closing photocells

Fig. 9
g. 9

Connection of a pair of opening photocells and a pair of closing photocells

Fig. 10

Fig. 11

## Connection of 2 N.C. contacts in series

 (e.g. Photocells, Stop)

Fig. 12

## Connection of 2 N.O. contacts in parallel

 (e.g. Open A, Open B)

Fig. 13
4.2. Terminal board J3 - Power supply (fig. 2)

PE: Earth connection
N : 230 V ~ power supply ( Neutral )
L : 230 V~power supply (Line )
NB.: For correctoperation, the board must be connected to the earth conductor in the system. Install an adequate differential thermal breaker upstream of the system
4.3. Terminal board J4 - Motors and flashing lamp (fig. 2)

M1 : COM / OP / CL: Connection to Motor 1 Can be used in the single-leaf application
M2 : COM / OP / CL: Connection to Motor 2 Cannot be used in the single-leaf application
LAMP : Flashing lamp output ( 230 V ~)

### 4.4. Terminal board J1-Accessories (fig. 2)

OPENA-"Total Opening"command(N.O.): any pulsegenerator (push-button, detector, etc.) which, by closing a contact, commands opening and/or closing of both gate leaves. To install several full opening pulse generators, connect the N.O. contacts in parallel (see fig. 13).
OPEN B - "Partial Opening" command (N.O.) / Closing: any pulse generator (push-button, detector, etc.) which, by closing a contact, commands opening and/or closing of the leaf driven by motor M1. In the $\mathbf{B}$ and $\mathbf{C}$ logics, it always commands closing of both leaves.
To install several partial opening pulse generators, connect the N.O. contacts in parallel (see fig. 13).
STP - STOP contact (N.C.): any device (e.g. a push-button) which, by opening a contact, is able to stop gate movement.
To install severalSTOP devices, connect the N.C. contacts in series (see fig. 12).
NB.:IfSTOP devices are not connected, jumperconnect the STP terminals and -.
CLFSW - Closing safety devices contact (N.C.): The purpose ofthe closingsafety devicesisto protecttheleafmovement areaduring closing. During closing, in the A-S-E-EP logics, the safety devices reverse the movement of the gate leaves, orstop and reverse the movement when they are released (see programming of microswitch DS2 - SW2). During the closing cycle in logics $\mathbf{B}$ and $\mathbf{C}$, they interrupt movement. They never operate during the opening cycle. If the closing safety devices operate when the gate is open, they prevent the leaf closing movement.
NB.: If no closing safety devices are connected, jumper connect terminals CL and -TX FSW (fig. 7).
OP FSW - Opening safety devices contact (N.C.): The purpose of the opening safety devices is to protect the leaf movementarea during opening. During opening, in the A-S-E-EPlogics, the safety devicesstop the movement of the gate leaves and reverse the movement when they are released. During the opening cycle in logics $\mathbf{B}$ and $\mathbf{C}$, they interruptmovement. Theyneveroperate duringthe closing cycle.
If the opening safety devices operate when the gate is closed, they prevent the leaf opening movement.
NB.: If no opening safety devices are connected, jumper connect inputs OP and -TX FSW (fig. 7).

## - - Negative for power supply to accessories

$\pm-24$ Vdc - Positive for power supply to accessories
Important: Accessories max. load is 500 mA . To calculate absorption values, refer to the instructions for individual accessories.
-TXFSW - Negative for power supply to photocell transmitters. If you use this terminal for connecting the negative for supplying power to the photocell transmitters, you may, if necessary, also use the FAIL SAFE function (see programming of microswitch DS2-SW3).
If this function is enabled, the equipment checks operation of the photocells before every opening or closing cycle.

### 4.5. TerminalboardJ5-Indicator-lightandElectric lock (fig.2)

W.L. - Power supply to indicator-light

Connecta24Vdc-3Wmax. indicator-light, ifnecessary, between this terminal and the +24 V supply. To avoid compromising correct operation of the system, do not exceed the indicated power.

## LOCK - Power supply to electric lock

If necessary, connect a 12 V ac electric lock between this terminal and the +24 V supply.

### 4.6. Connector J2-Rapid connection (fig.2)

This is used for rapid connection of Minidec, Decoder and RP receivers (see fig. 14, 15, 16 and 17). Connect the accessory, with the components side facing the inside of the card. Insert and remove after cutting power.

N.B.: Never put two accessories (Plus 433 or 868, Digicard, Digikey) in paralle on the same decoder, but use a decoder for every accessory.

Fig. 17
5. MICROSWITCH PROGRAMMING

DS1
Fig. 18a

The equipment is endowed with two groups of microswitches DS1 (fig. 18a) and DS2 (fig. 18b)-which make it possible to program the gate operation parameters.

### 5.1. MICROSWITCHES DSI fig. 18a)

## Leaf I and 2 force

By using microswitches SW1, SW2 and SW3, the force (and thus anti-crushing safety) of the operator connected to leaf 1 can be programmed. The same operation has to be repeated on the motor connected to leaf 2, by using microswitchesSW4, SW5 and SW6.

> N.B. As concerns the hydraulic operators, select maximum force (level 8) on the equipment and adjust thrust with the operator by-pass valves.

## Function logic

The automated system's function logic can be selected with microswitchesSW7, SW8, SW9 andSW10. By selecting an automatic logic (A, S), the combination of microswitches enables selection of pause time too (waiting time, in opening position, before automatic re-closing).
The available logics - their operation is described in tables 3/a-b-c-d-e-f, are as follows: A - S (Automatic), E - EP - B (Semiautomatic), C (Dead-man)

## Closing leaf delay

Programming of microswitchesSW11 andSW12enables delay of the closing start of leaf 1 with respect to leaf 2, in order to avoid the leaves overlapping during movement, and thus increase the safety of the system.

### 5.2. MICROSWITCHES DS2 (fig. 18b)

## Openingleafdelay

Programming of microswitchSW1 enables delay of the opening start of leaf 2 with respect to leaf 1 , in order to avoid the leaves obstructing each other during the initial stage of movement.

## Closing photocells logic

By using microswitch SW2, you can select the type of behaviour of the automated system if the photocells protecting the gate closing movementare engaged. You can obtain eitherimmediate reversing of the leaves or a stop followed by reversing when the photocells are disengaged.

## Fail safe

Programming the microswitch SW3 makes it possible to activate orde-activate the photocells control test. When Fail safe is active, the equipment checks the photocells before every opening or closing movement.

## Reversing stroke + over-pushing stroke

By using the microswitch SW4, you can activate the "reversing stroke" and the "over-pushing stroke". The "reversing stroke" pushes the leaves to close for a few moments before opening the gate, thus facilitating release of the electric lock. The "over-pushing stroke" commands a closing thrust at full force when the gate has already reached its stop limit, thus facilitating the locking of the electric lock.

## 6. START-UP

### 6.1. LED CHECK

The table below shows the status of the LEDs in relation to to the status of the inputs.
Note the following: Led lighted = closed contact
Led off = open contact
Check the state of the LEDs as per Table.
Operation of the status signalling LEDs

| LEDs | LIGHTED | OFF |
| :--- | :--- | :--- |
| OP_A | Command activated | Command inactive |
| OP_B | Command activated | Command inactive |
| STOP | Command inactive | Command activated |
| FSWCL | Safety devices disengaged | Safety devices engaged |
| FSWOP | Safety devices disengaged | Safety devices engaged |

NB.: The status of the LEDs while the gate is at rest are shown in bold.

Furthermore, the DL10 LED is on the board and functions as detailed in the following table:

| DL10 |  |  |
| :---: | :---: | :---: |
| Gate closedatrest: <br> OFF | Gatemovingoron <br> pause: <br> like indicator-light | Timelearning: <br> flashesrapidly |

### 6.2. ROTATION DIRECTION AND FORCE CHECK

1) Program the microswitches of the 452 MPS control board according to need, as shown in Chapter 5.
2) Cut power to the electronic control equipment.
3) Release the operators and manually move the gate to the mid-point of the opening angle.
4) Re -lock the operators.
5) Restore power.
6) Send and opening command on the OPEN A input (fig.2) and check if the gate leaves are being commanded to open.
N.B.: If the first OPEN A pulse commands a closing, cut power and change over the phases of the electric motor (brown and black wires) on the 452 MPS terminal board.
7) Check power setting of the motors and, ifnecessary, modify it (see Chapter 5.1).
8) Stop leaf movement with a STOP command.
9) Release the operators, close the leaves and re-lock the operators.

### 6.3. LEARNING OF OPERATING TIME

WARNING: during the learning procedure, the safetydevicesare disabled! Therefore any transit must be avoided in the leaf movement area when this operation is carried out.
Opening/closing time is established by a learning procedure.

## - LEARNING PROCEDURE:

Check if the leaves are closed, and then press F push-button for one second: DL10 LED begins flashing and the leaves begin the opening movement.
Wait for the leaf to reach the opening stop limit and then supply an OPEN A pulse (with the radio control or with the key controlled push-button) to stop the movement: the leaves stop and the DLIOLED stops flashing.
The procedure has ended and the gate is ready to operate.

### 6.4. PRE-FLASHING

If you wish to increase the equipment's safety level, you can activate the pre-flashing function which enables the flashing lamp to go on 5 seconds before the leaf starts to move.
Pre-flashing activation procedure:
1 - check if the gate is closed
2 - open and keep open the Stop contact
3 - check if the DL10 LED is OFF (if lighted, pre-flashing is already active)
4 - briefly press the F push-button and checkif the DLIOLED lights up.
5 - close the Stop contact(DL10 goes OFF).
Procedure for disabling the function:
1- check if the gate is closed
2 - open and keep open the Stop contact
3 - check if the DLIO LED is lighted (if OFF, pre-flashing is already disabled)
4 - briefly press the F push-button and checkif the DLIOLED is OFF.
5- close the Stop contact

## 7. AUTOMATED SYSTEM TEST

When you have finished programming, check if the system is operating correctly.
Most important of all, check if the force is adequately adjusted and if the safety devices are operating correctly.
Table 3/a

| LOGIC "EP" | PULSES |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| GATE STATUS | OPEN-A | OPEN-B | STOP | OPENING SAFETY DEVICES | CLOSING SAFETY DEVICES | OP/CLOS. SAFETY DEVICE | W.L. |
| CLOSED | Openstheleaves | Opens the free leaf | No effect(OPEN disabled) |  | Noeffect | Noeffect(OPEN disabled) | OF |
| OPEN | Re-closes theleaf/leaves immediately |  | Stopsoperation | No effect(OPEN disabled) | No effect | PEN disabled) | lighted |
| AT CLOSING | Stopsoperation |  |  | No effect (saves OPEN) | seeparagraph 5.2. | Locks and, on release, reverses at opening | flashing |
| ATOPENING | Stops operation |  |  | Reverses at closing | Noeffect | Locks and, onrelease, continues opening | lighted |
| LOCKED | Restarts moving in reverse direction (always closes after a Stop) |  | Noeffect(OPENdisabled) | No effect (if it mustopen, it disables OPEN) | No effect (ifitmust close, itdisables OPEN) | Noeffect(OPEN disabled) | lighted |

| LOGIC"B" | PULSES |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| GATE STATUS | OPEN-A | OPEN-B | STOP | OPENING SAFETY DEVICES | CLOSING SAFETY DEVICES | OP/CLOS. SAFETY DEVICE | W.L. |
| CLOSED | Opens the leaf or leaves | Noeffect | Noeffect (OPEN-A disabled) | No effect (OPEN-Adisabled) | No effect (OPEN-Bdisabled) | No effect (OPEN-A disabled) | OF |
| OPEN | Noeffect | Closes the leaves or leaf | Noeffect (OPEN-Bdisabled) | Noeffect (OPEN-A disabled) | No effect (OPEN-Bdisabled) | Noeffect (OPEN-Bdisabled) | lighted |
| AT CLOSING | Reverses at opening | Noeffect | Stops operation | Noeffect | Stops operation (OPEN-Bdisabled) | Stopsoperation (OPEN-A/Bdisabled) | flashing |
| ATOPENING | Noeffect | Noeffect |  | Noeffect (OPEN-Adisabled) | No effect | Stopsoperation (OPEN-A/Bdisabled) | lighted |
| LOCKED | Opensthe leaf or leaves | Closes the leaves or leaf | No effect (OPEN-A/Bdisabled) | No effect (OPEN-Adisabled) | No effect(OPEN-Bdisabled) | Noeffect (OPEN-A/Bdisabled) | lighted |

| LOGIC "C" | COMMANDS ALWAYS PRESSED |  | PULSES |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| GATE STATUS | OPEN-A | OPEN-B | STOP | OPENING SAFETY DEVICES | CLOSING SAFETY DEVICES | OP/CLOS. SAFETY DEVICE | W.L. |
| CLOSED | Opens the leaf or leaves | Noeffect | No effect (OPEN-A disabled) | Noeffect (OPEN-A disabled) | Noeffect (OPEN-Bdisabled) | No effect (OPEN-A disabled) | OF |
| OPEN | No effect | Closes the leaves or leaf | Noeffect (OPEN-Bdisabled) | No effect (OPEN-Adisabled) | Noeffect (OPEN-Bdisabled) | Noeffect (OPEN-Bdisabled) | lighted |
| AT CLOSING | Stopsoperation |  | Stopsoperation | Noeffect | Stops operation (OPEN-Bdisabled) | Stopsoperation (OPEN-A/Bdisabled) | flashing |
| ATOPENING |  | Stops operation |  | Stopsoperation (OPEN-A disabled) | Noeffect | Stopsoperation (OPEN-A/Bdisabled) | lighted |

[^0]
[^0]:    (1) If maintained, it prolongs the pause until disabled by the command (timer function)
    (2) If remaining pause time is shorter than 5 sec ., when safety devices are released, it closes after 5 sec . NB.: Effects on other active pulse inputs in brackets.
