DA.2XS433/DA.2XSE433/DA.2XS306 control unit with microcontroller

The control unit with microprocessor DA.2XS433/DA.2XSE433/DA.2XS306 can be used with motors having a power not exceeding 750W.

Installation instructions.

- a) The electrical installation and functioning logic must comply with current standards.
- b) Keep the power cables (for the motor and power supply) away from the control cables (buttons, photo-cells, radio). To avoid interference use two separate sheaths (see EN 60204-1 15.1.3).
- c) Check all the connections again before supplying voltage.
- d) Check that the Dip-Switch settings are as required.
- e) The normally closed contacts which are not in use should be short-circuited.
- f) If the direction of the motor rotation is not correct, invert the "OPEN" - "CLOSE" wires of the motor and the limit switches wires "FCA" - "FCC".

Input/Output functions

- (1,2) INPUT230VAC= Control unit power supply, 230Vac, 50Hz (keep to phase/neutral).
(3,4,5) COM/APRE/CHIUDE= To relevant terminals of motor, at 230Vac, 50Hz.
It is mandatory to connect the Ground wire (yellow/green) onto the motor frame.
(6,7) OUT24VAC= Output, 24Vac auxiliary power supply (100mA max.).
(8) COM= Common to all control inputs.
(9) FCC= Input, closing limit switch (N.C. contact).
(10) FCA= Input, opening limit switch (N.C. contact).
(11) FTC= Input, photocell receiver (N.C. contact).
(12) Stop= Input, Stop push-button (N.C. contact).
(13) P.P.= Input, Step-by-Step push-button (N.O. contact).
(14) Apre= Input, Open push-button (N.O. contact).
(15) Chiude= Input, Close push-button (N.O. contact).
(16,17) ANT.= Input, antenna

In the version DA2XSE only

- (18,19) ELS.= Free contact for connection to electric lock.
The power supply of ELS should be provided separately.

If a Flashing light is to be mounted, it should be connected between terminal 1 (input, phase) and terminal 3 (connection to motor common).

The control unit is equipped with a built-in radio module for the reception of both fixed code and variable code remote controls.

To use a remote control its data should be stored in the unit memory. This procedure is shown hereunder. The unit is able to memorize up to 14 different codes.

Dip-switch functions

- DSW1= Operating mode for "P.P." (Step-by-Step) button and remote control.
Off= Operation: "APRE" - "STOP" - "CHIUDE" (OPEN - STOP - CLOSE)
On= Operation: "APRE" - "CHIUDE" - "APRE" (OPEN - CLOSE - OPEN)
- DSW2= It enables or disables the automatic closure.
Off= Automatic closure disabled
On= Automatic closure enabled
- DSW3= It enables or disables the "multi-flat" function.
Off= Multi-flat function disabled
On= Multi-flat function enabled
- DSW4= It enables or disables the forewarning flashing light.
Off= Forewarning light disabled
On= Forewarning light enabled

Programming the control unit

Gain access to the programming mode of the control unit by pressing the MENU push-button.

After the first pressure of the button the PGM LED, which is usually flashing, will feature a fixed light to indicate that the programming mode has been entered.

Presetting the operating time (TL)

When the PGM and the TL LED's (first and second from top) are switched on simultaneously, the control unit is ready to store the operating time in memory. When this time has elapsed, the motor stops even if the limit switches have not been reached.

The following presetting (Automatic closure) is entered by pressing the MENU button.

When the PROG button is pressed, the motor starts in the opening phase. The motor carries on the opening movement for as long as the button is kept pressed. When the button is released, the motor stops and the operating time is memorized. The control unit then exits the programming mode. The time in seconds can be calculated with the flashing of the TL LED, which performs a flashing each second.

The maximum value of TL is 255 s (4 min and 15 s). Once the maximum value is reached, the control system stores the value in memory even though the button is not released.

Presetting the automatic closure time (TCA)

The automatic closure time can be preset by pressing the Menu push button twice.

When the PGM and the TCA LED's (first and third from top) are switched on simultaneously, the control unit is ready to store the automatic closure in memory.

When the PROG button is pressed, the TCA LED starts flashing and continues flashing for as long as the button is kept pressed. When the button is released, the LED stops flashing the TCA is memorized. The control unit then exits the programming mode.

The time in seconds can be calculated with the flashing of the TCA LED, which performs a flashing each second. The maximum value of TCA is 255 s (4 min and 15 s). Once the maximum value is reached, the control system stores the value in memory even though the button is not released.

Erasing the remote control codes from memory

The remote control codes can be erased from memory by pressing the Menu push button 3 times.

When the PGM, RX and TCA/RES LED's (first, third and fourth from top) are switched on simultaneously, the control unit is ready to erase the codes from memory.

When the PROG button is pressed, the TCA/RES LED switches off and erasing of memory starts; when the LED starts flashing the operation is ended. If the button is still pressed, the control unit will wait to restart operation, otherwise it will start immediately.

Storing a new code in memory

A new remote control code can be stored in memory by pressing the Menu push button 4 times.

When the PGM, RX and TL/CODE LED's (first, second and fourth from top) are switched on simultaneously, the control unit is ready to store a new code in memory. If RX and TL/CODE LED's are flashing alternatively, this means that memory is full and no more new codes can be stored.

By pressing the MENU button it is possible to exit the programming mode.

If memory is not full, the control unit waits for the typing in of the new remote control code. The TL/CODE LED indicates that programming has been successfully carried out with 5 flashes. The control unit exits the programming mode automatically.
