Declaration of Conformity

Company Name: VDS, Internacional Co. Soc. Coop..

Address: Via Circolare P.I.P. Sn – 65010 Santa Teresa di Spoltore (PE)

National Identity Number (CIF/NIF): it 01807970684

CERTIFIES:

That the hydraulic equipment PHV240-PHV360 conforms to the following EU Directives:

89/392/EEC 91/368/EEC	On the approximation of the laws of the Member States relating to machinery. Council Directive amending the previous Directive on the approximation of the laws of the Member States to
	machinery.
93/44/EEC	Council Directive amending Directive 89/392/EEC on the approximation of the laws of the Member States to machinery.
93/68/EEC	Regulating the Directive on simple pressurised containers, construction products, electromagnetic compatibility, machinery, individual protection equipment, non automatic weighing machinery, terminal telecommunication equipment and electrical material destined for use with specific voltage limits.
2004/108/EEC	Council Directive amending Directive 89/336/EEC on approximation of the laws of the Member States to electromagnetic compatibility.
73/23/EEC	On the approximation of the laws of the Member State son electrical material destined for use with specific voltage limits.
EU-EN 292-2/A1	Safety of machinery. Basic Concepts and general principles of design.
EU-EN 60204-1	Safety of machinery and electrical equipment of machinery.
EU-EN 292/1	Safety of machinery. Basic concepts and general principles of design.
EU-EN 418	Safety of machinery and emergency Shopping equipment, functional aspects.
EU-EN 982:96	Safety of machinery. Safety requirements for systems and components of hydraulic and pneumatic transmissions Hydraulic.

This equipment bears the stamp of EEC conformity

IMPORTANT SAFETY INSTRUCTIONS

WARNING! To reduce the risk of injury or death it is important to closely follow all of the following instructions. Incorrect installation or inappropriate use may cause serious personal injury.

This installation manual and safety instructions are an integral part of the product and must be supplied to the user. These instructions should be retained by the owner and/or operator of the gate.

This product has been designed and constructed exclusively for the use indicated in this manual. Any inappropriate use of this product may result in damage to the product and/or personal injury.

To ensure proper functioning of the product and personal safety only use the mounting equipment supplied and the spare parts and accessories supplied by the manufacturer.

Do not install this equipment in an easily flammable environment. The presence of inflammable gases or smoke are a serious threat to personal safety.

This equipment has an anti crushing safety device. In addition to this safety device it is also necessary to install additional safety devices (for example: photo cells and/or pressure sensitive strips, etc.) that will prevent any danger resulting from mechanical movement (for example crushing, pulling or ripping).

In addition to the above mentioned safety devices it is also necessary to install at least one light signal as well as a printed notice fixed to the gate.

The installation of this equipment, the electrical connections and maintenance of the equipment may only be carried out by qualified technicians. Failure to meet this requirement may cause severe injury and/or death, for which the manufacturer will not be held responsible.

For protection against electrical overload or short circuit, always install a 0.03 amp differential and a thermal magnetic switch with a contact aperture of at least 3mm

This equipment must be earthed with a yellow/ green cable, connected to the earth terminal in the junction box. The safety of this product is only guaranteed if the equipment is properly earthed.

Before operating this product you must ensure that all connections have been properly made, that the safety devices are properly working and that the pressure force is adjusted to the minimum according to regulations regarding automatic doors (EU Directive 89/392 and EN 12453 y EN 12445 norms).

Before installing this equipment, ensure that the structure of the gate is strong enough and properly balanced. The gates must work freely in both directions and have no friction points before the automatic operator is installed.

SAFETY INSTRUCTIONS FOR THE USER

In the event that a malfunction in the equipment, contact a qualified technician. DO NOT try to repair the equipment yourself.

Do not allow children or pets near the gate. Never allow children to play with the gate controls. Keep the remote control in a safe place, out of reach of children and unauthorised persons.

In the event of a power cut or emergency, you must learn how to use the manual release mechanism according to the procedures found in this installation manual

Keep these safety instructions in a safe place. Make sure that all persons who use the gates or who may be near the gates when they operate are aware of the dangers associated with automatic opening gates

If you sell or rent the property with this equipment installed, give the new owner or tenant a copy of these safety instructions

TECHNICAL DATA MODEL: PHV

TECHNICAL DATA	PHV			
	240	360		
Current	230V	50HZ		
Power	276 W			
Consumption	1,3	3 A		
Condenser	16	i uf		
Maximum Pressure	50	bar		
Hydraulic Arm	242 mm	362 mm		
Hydraulic arm exit time	28 sec.	40 sec.		
Hydraulic arm entry time	23 sec.	34 sec.		
Compression	0 to 7793 N (795Kg)

FREQUENCY OF USE

The curve below allows calculation of the maximum working time (T) depending on the frequency of use (F). To ensure correct operation of the equipment the working time should be within the shaded area.

These trials have been carried out at a temperature of 22°C. If the equipment is operating at a higher temperature or is exposed to direct solar radiation, the frequency of use can be reduced by 20%.

Note. 5 seconds more are needed to assure the complete opening and closing of the door.

There are heavy use times during the day where vehicle transit is higher. Calculations should be carried out during this period of time.

E.G.

What is the maximum working time for a door that has a pause of 30 seconds and a time between cycles of 40 seconds?

SPECIAL MEASUREMENTS INWARD OPENING (Fig.2)

In some cases it may be necessary to vary the standard dimensions, e.g., because of space restrictions in fixing the supports. The above graphs show dimension ranges for inward opening 360 and 240 models.

At the top part of each graph are the range of gate opening angles and a series of diagonal lines from which the values of A and B may be determined (fig.2 page 5). These values should be as near as possible to those determined by the thick vertical line.

The dimension for C is constant at C = 90 mm for model 360 and C = 70 mm for model 240.

Example: What should be the value for A and what model should be used for a gate with an opening angle of 100° where B = 140?

Answer: Model 360 where A =195 mm. See the example in the above graph shown by the dotted line for the 360 model : EXAMPLE (SPECIAL DIMENSIONS))

Conclusion: It would not be possible to use the 240 model because the value for A would be outside the minimum for this model.

MOUNTING INSTRUCTIONS

1. Fix the pillar support (**Fig.1 Page 7**) shortening or lengthening the support according to the dimensions A and B shown in the table on page 4. The support should be fixed at a height where the gate has a sufficiently rigid surface to fix the gate support, bearing in mind that the gate support will be fixed 15 mm lower than the pillar support. (**Fig.1 Page 5**).

2. Shorten or lengthen the gate support according to the dimensions for C shown in the table on page 5. Connect the gate opener to the gate support, with the rod completely extended (**Fig.2 Page 7**) and with the swivel joint nut fully tightened (**Fig.3 Page 7**). Once this has been done use a spirit level (**Fig.4 Page 7**) to mark the position of the gate support on the gate. Dismantle the gate support and fix it to the gate using the markings previously made.

3. Mount the motor and unscrew the swivel joint nut three turns to ensure closure. Attach the security ring and the safety bolt supplied. (Fig.6 Page 7). EARTH

4.Electrical connections: Unscrew the end cover and connect the terminals according to the following diagram:

COMMON

CONDENSER

230

Vac

6. Once the motor is working correctly the limit valves can be adjusted (**Fig.10 Page 7**). The limit valves control the force and are independent in opening (blue limit valve) and closing (red limit valve) the gate. The screws can be adjusted by turning them a maximum of 45°, and should be adjusted slightly above the minimum possible, in this way the force of the hydraulic system is reduced thus increasing safety.

7. The closing buffer can then be adjusted (**Fig.11 Page 7**), thus avoiding the door banging closed. To adjust the closing buffer turn the screw a maximum of 10°(If the buffer valve is completely closed then 15mm of buffering will be lost).

8. The aluminium arm cover can then be pressured into position (**Fig.12 Page 7**), followed by its plastic cover and the end cover.

OPERATION OF THE HYRAULIC LOCK

With hydraulic powered gates it is necessary to consider the type of opening required: 2

- Inward opening (Fig.2, Page 5) Kit 'KM' should be connected to position 2 (see diagram).

- Outward opening (Fig.3, Page 5) Kit 'KM' should be connected to position 1 (see diagram).

BLOCKING FUNCTION

The BAC system used in the PHV range provides a wide range of features which can be adjusted to ensure that the equipment may be adjusted for different requirements.

EMERGENCY RELEASE SYSTEM

This valve allows us to override the system in order to operate the gate manually in the event of power cuts. To move the gate manually, open the cover and turn the valve 360° anti clockwise . To return to the automatic system turn the valve clockwise.

IMPORTANT: If the valve is not tight the motor will not function.

Under view of motor.

By adjusting the red and blue valves (located under the motor), gate actions can be reversed. The options are as follows:

Opening and closing reversed.

IMPORTANT: if these valves are slightly opened they serve as an excellent anti-wind system. The pressure of the gate can be adjusted with the motor not working. A lock is required for gates over 1.8m in length.
