

Outdoor Camera

Maximum deterrence thanks to the built-in siren

SUMMARY

Somfy Outdoor Camera is the most deterrent outdoor camera. When a presence is detected you'll be immediately alerted through your smartphone and a video of the event will be sent to you. You can then trigger the 110dB siren through the Somfy Protect app and, if you've connected a light to your camera, this will automatically switch on to reinforce the deterrence.

THE BENEFITS

1. Monitor your surroundings and protect your home

You can use the free Somfy Protect app to watch your home at any time and reassure yourself that everything is normal. When an intrusion is detected, you'll receive a free video of the incident and won't miss a thing. If the incident is an intrusion, you can activate the siren; if it's just a delivery person or a neighbour you can hear and speak with them. In any case, you can re-watch and download the video for up to 24 hours after the event.

2. High performance for a reliable and effective product

- Full HD 1080p images with clear night vision range of up to 8m
- 130° wide diagonal angle and x8 zoom
- Built-in 110dB siren
- SomfyVision™ advanced motion detection
- HDR (High Dynamic Range) function to compensate for brightness problems
- Built-in speaker and microphone
- Intelligent Activation: automatically deactivates the protection when you return home and a notification to remind you to activate it when you leave
- Data secured with AES-256 encryption

3. Suitable for any type of home

Whether it's a home in the city, a home in the country, or an architectural masterpiece, the Somfy Outdoor Camera is perfect for any type of home. Available in two colours (anthracite grey and white), it meets your design and electrical constraints, allowing you to choose the installation method most suitable for your needs:

- Connected to a mains power socket (cable not supplied)
- Connected to an electric wall outlet (for example by replacing a light)
- Connected to the power supply of an existing light:
 - You can then control the light from the Somfy Protect app
 - It will automatically switch on when you arrive home
 - If night detection is enabled, the light will automatically switch on when darkness falls to deter any potential intruders. You can then reinforce the deterrent by triggering the siren from your smartphone.
